

# INVENTORY GO-LIVE IN JUST A FEW WEEKS FOR SAVE GROUP

The SAVE Group transformed its approach to year-end inventory after discovering HRC Software's ready-to-use solutions during the annual SAP French-speaking Users' Convention in October 2023. The solution is live in December 2023, less than 2 months after meeting.

In search of a high-performance and ergonomic mobile solution to carry out inventories for its AAI and ITEX entities, SAVE quickly decided to evaluate HRC Software's Warehouse solution by installing it on its SAP system.

Just one week after a validation meeting and a demonstration, the mobile solution was already being tested in real conditions.

Quickly tested and deployed, the HRC Software Warehouse solution for inventory management enabled SAVE to carry out its inventory as early as December 2023, marking a successful transition to mobility and increased operational efficiency, all in just a few weeks.

Next step ? Convinced of the performance of the solution, the SAVE group is studying the possibility of adopting other HRC Software solutions to extend the functional coverage, and plans to deploy the Warehouse package on its Société Française de Réservoirs entity by the end of 2024.

## THE SAVE GROUP

The SAVE group brings together several companies specializing in building finishing work and fire protection:

- **Atlantique Automatismes Incendie (AAI)** installs sprinkler extinguishing systems in the building sector and today has 20 agencies in France with 550 employees. Operating locally and internationally, AAI is a designer, prefabricator, installer, operator and maintenance operator.
- **Société Française de Réservoirs:** since 1996, the company has designed, manufactured, installed and maintained small and large capacity galvanized steel tanks. It has more than 6,000 tanks around the world.
- **ITEX:** With 3 agencies in France, Ingénierie techniques d'extinction (ITEX) is a structure specializing in active response to fires linked to special risks. As a major installer in extinguishing engineering, ITEX evaluates with its clients the best technical options to implement and helps define strategies to defend installations against potential damage.

# INVENTORY GO-LIVE IN JUST A FEW WEEKS FOR SAVE GROUP

**HRC Warehouse - Track your inventory management in real time, via a fluid and intuitive interface**

HRC Software's mobile application solutions guide your operators during all their daily activities for your Supply Chain, Maintenance and Procurement processes, all integrated into your SAP ECC6 & S/4 system. Installed in just 48 hours, they are designed for industrial contexts, taking into account the environmental constraints of your users. Intended for warehouse workers and forklift operators, or even store managers, they allow you to optimize your physical flows and boost your operational performance.

## 4 packages to cover all of your business processes

 HRC SPARE PARTS <b>Streamline the management of your spare parts</b>	 HRC WAREHOUSE <b>Optimize your stocks</b>	 HRC MAINTENANCE <b>Secure your maintenance</b>	 HRC PROCUREMENT <b>Optimize your procure-to-pay</b>
